Comments: (If possible, please reference section and/or page number in document if applicable.)

The Yucca Mtn site, in the remote Mojave desert is one of the safest and secure sites in the U.S. It is geologically favorable and offers extremely low possibility for long term ground water contamination. ninety nine % of the public is totally ignorant of the geologic favorability of the site.

The transport of nuclear waste is far less dangerous than the regular transport of fuels, chemicals, caustics and hazardous materials on our highways and rail system every day.

The citizens of Nevada should stop listening to the hysterical rhetoric of poorly informed environmental extremists and follow the courageous example of former Nevada governor List. This program can have great positive economic benefits to Nevada. Money related to this program should be spent to benefit the state and its people and not wasted on useless legal obstructionism.

Nuclear power is here to stay. Spent fuel from generation plants is inadequately stored at present. Yucca Mtn offers a safe long term solution to this problem.

Please note: For your comment(s) to be considered by the Secretary of Energy before a decision is made whether to recommend the site to the President, your comment(s) need to be received by the U.S. Department of Energy by September 20, 2001. To the extent practicable, the Department will consider comments received after September 20, 2001.

Please feel free to attach additional pages; more postage may be needed. If you prefer to mail your comments, you may use the back side of this sheet as a postage-paid, self-mailer. To do so, fold in thirds along the dotted line so address and postage-paid notice are visible, then secure with tape.
